Best Sellers Rank: #57,877 in Books (See Top 100 in Books) #22 in Books > Business & Money > Investing > Commodities

**Customer Reviews**

"Mean Reversion Trading Systems" (2013) is yet another major contribution to the theory, understanding and practice of Quantitative Technical Analysis by Dr Howard Bandy. This follows his superb earlier books "Quantitative Trading Systems" (2008) and "Modelling Trading System Performance" (2011). In this latest book Dr Bandy has built on and extended the thinking of his previous books. Howard has both a deep and broad statistical, mathematical and computational understanding of both financial markets, quantitative trading models and resultant systems when markets and models are combined. In addition, he has the written clarity and educational ability to explain the complexities in a way that an intelligent trader can understand and follow. Throughout this book, as with his earlier work, Howard organises subject material logically and then explains concepts succinctly with language appropriate to a general (but intelligent) trading audience. His work has academic rigour but is designed for the non-academic, his description of probabilities and statistical analysis in the financial markets are second to none. Following conceptual descriptions, Howard then provides many worked examples and, where appropriate, computer code that demonstrates and amplifies the points he is making. Dr Bandy works to create understanding of the complete trading model including: Issue selection, Entries, Exits, Risk assessment, Position sizing, Model development, Model-System Walk-forward back testing etc. He also looks at the transformation of common indicators to produce clearer and more reliable
trading results.
